To All Concerned,

We are writing this letter in support of any efforts to electrify local bus fleets. It is a well known fact that there are air quality concerns here in the Uintah Basin that not only have the potential to effect the health and wellness of the local residents, but threaten local industries as regulations and policies affect the ability for local businesses to be competitive in the open market. As local area oil producers, we wholly support and encourage any efforts made by the local area to reduce emissions that impact our air quality, and particularly those that lead to our winter ozone challenges, such as diesel emissions. We support electrifying fleets and finding other tools to reduce emissions and improve air quality. We feel that together we can find and implement solutions that will allow for cleaner air and a cleaner environment while allowing local industry to thrive and compete on a global scale.

Sincerely,

Rikki Hrenko-Browning  
President
